

PS Sub Specifications

PS12

12" Floor Standing Sub for Home Cinema Systems

Woofer: 12" Long Excursion Treated Paper Cone

Power: 250 Watts RMS

Input: Left & Right Line Level & LFE

Frequency Response: 28Hz - 200Hz

Phase Switch: 0 - 180°

Protection: Overload Protection Circuit

Power On/Off: Auto Sensing

Port: Rear Slotted

Finish: Black Wood Grain

Feet: Chrome

Dimensions: H 17" x W 14" x D 17¹³/₁₆"

Unit of Measure: Each

PS10

10" Floor Standing Sub for Home Cinema Systems

Woofer: 10" Long Excursion Treated Paper Cone

Power: 120 Watts RMS

Input: Left & Right Line Level & LFE

Frequency Response: 32Hz - 200Hz

Phase Switch: 0 - 180°

Protection: Overload Protection Circuit

Power On/Off: Auto Sensing

Port: Rear Slotted

Finish: Black Wood Grain

Feet: Chrome

Dimensions: H 13³/₄" x W 11¹/₂" x D 16³/₄"

Unit of Measure: Each

PS8

8" Floor Standing Sub for Home Cinema Systems

Woofer: 8" Long Excursion Treated Paper Cone

Power: 80 watts RMS

Input: Left & Right Line Level & LFE

Frequency Response: 45Hz - 200Hz

Phase Switch: 0 - 180°

Protection: Overload Protection Circuit

Power On/Off: Auto Sensing

Port: Rear Slotted

Finish: Black Wood Grain

Feet: Chrome

Dimensions: H 12¹/₄" x W 9⁷/₈" x D 15¹/₄"

Unit of Measure: Each

Home Cinema Subwoofers

How Much Difference Can A Great Subwoofer Really Make?

The true test of any great subwoofer is defined by the performance of its five main components. Its woofer and motor structure, amplifier, crossover network and cabinet – each performing in harmony to achieve what every owner craves – the best possible sound.

It is with this in mind that Proficient developed the new PS Series of subwoofers. Hand-matched components, designed and built to work optimally together, makes the PS Series one of the most Home Theater-friendly subwoofers choices you can make.

The PS Series represents the kind of value and performance that has made Proficient the fastest growing brand in its class. It also represents thousands of hours of powerful, rich Home Theater performance for you.

The Inside Scoop Positively Irresistible

Take their high-current amplifier with built-in equalization. With very low distortion, more headroom and better dynamic range, it makes sure your soundtracks will deliver the bass performance needed to hear every bit of the action.

The PS Series' motor structure provides higher excursion, prodigious SPL and very low distortion for the cleanest bass around. And, since every subwoofer is only as good as its woofers, the PS Series builds with high-excursion designs for maximum SPL and reduced distortion.

And, because the PS Series features a high-current amplifier design, you'll get this remarkable performance from the smallest possible cabinet. A cabinet whose beautiful, rich sign and newly-styled front grille is suitable for any place you decide to place it.
